The World Leading BIM Software for Steel and Concrete Structures

- Our BIM software solutions based on Tekla Structures are used around the world to create, combine, manage and distribute accurate, constructable multimaterial models of all structures from residential buildings and offshore platforms to complex landmark structures.
- Tekla have an open approach to BIM. The software interfaces with other solutions and manufacturing machinery for efficient and error-free collaboration. With Trimble and partners, Tekla's BIM software can cover the entire construction workflow from structural design to manufacturing to site.
