

Today's Agenda

202

Status

Why us?

Emerging Futures

Sufficient & Efficient

Current trends

Conclusion

The Economist

Who are America's swing voters? Elon envy: pity Tesla's rivals What if Ukraine loses? Life in AI utopia

THE NEXT HOUSING DISASTER

The Economist

Wargaming European energy What will Lula do?

what will Luia do?

Big tech falls to earth

China's Taiwan-ready generals

S

Søren Jensen

NOVEMBER 5TH-11TH 2022

SAY GOODBYE TO 1.5°C

Why climate policy is off target

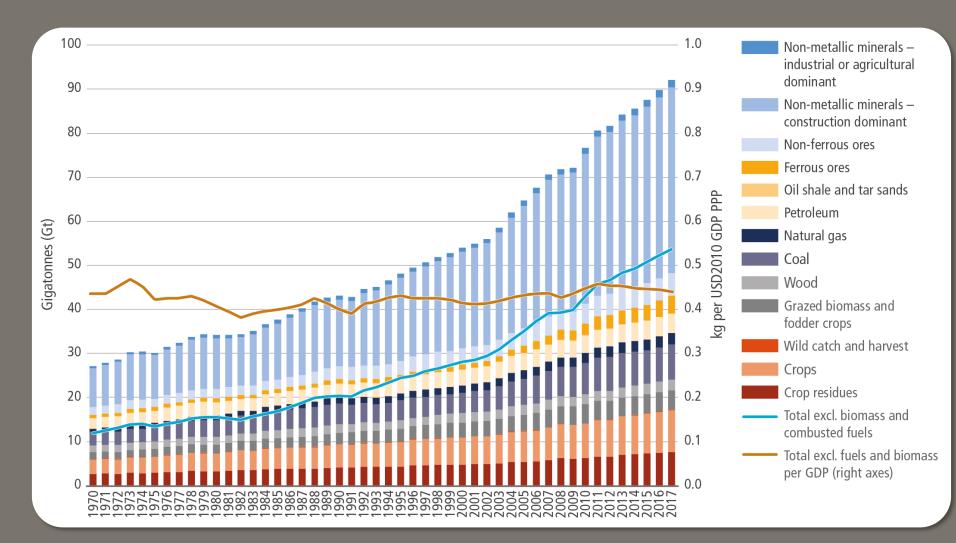

ω

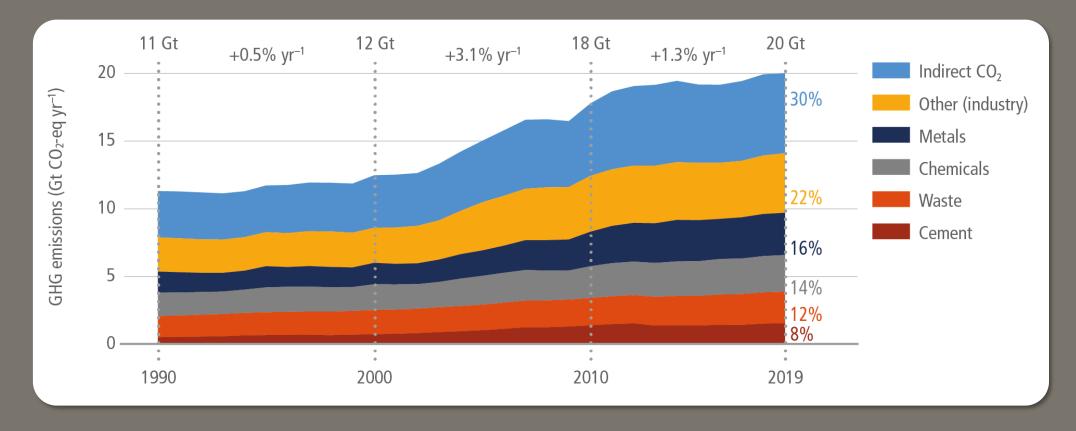

Why us?

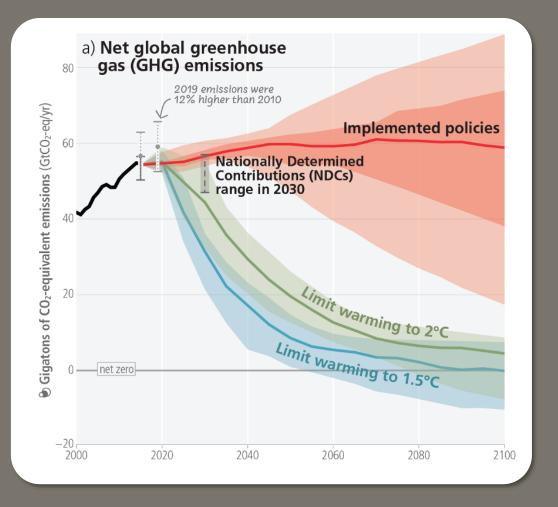

Raw natural materials extraction

Global industry sector emissions

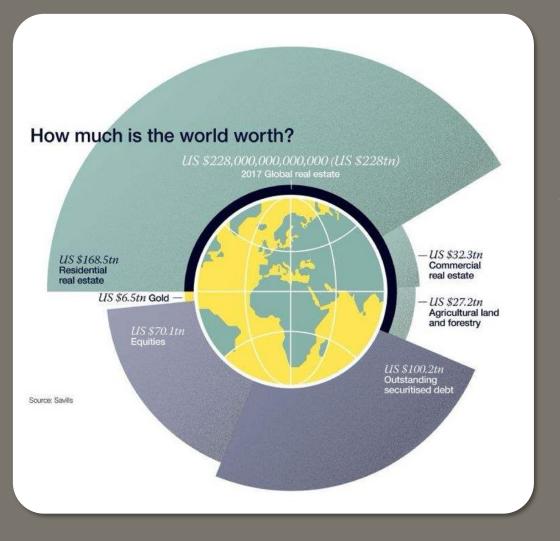

UN IPCC

UN Secretary-General António Guterres:

Cities are where the climate battle will largely be won or lost.

Real estate in numbers

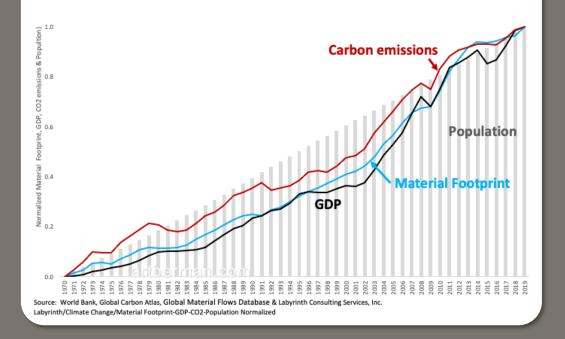

Global building floor area is expected to **double** by 2060.

Decouple

Carbon emissions and overshoot of planetary boundaries are unlikely to decrease as long as world GDP and population continue to increase

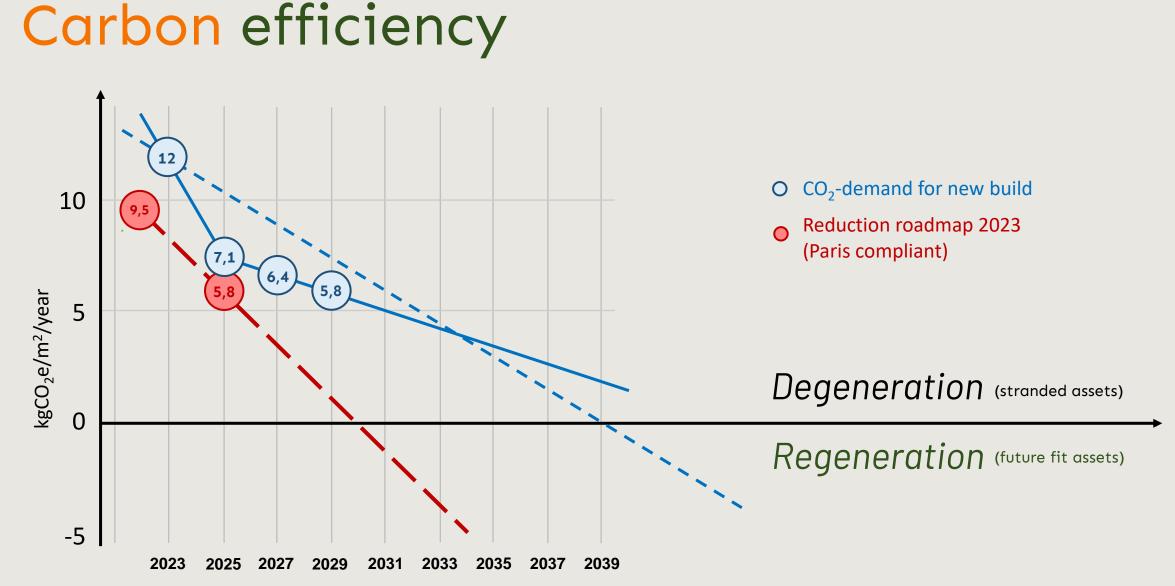

Ex-CEO of Unilever Paul Polman

What holds us back then, if anything, is a lack of willpower, moral leadership and imagination Søren Jensen

Emerging Futures

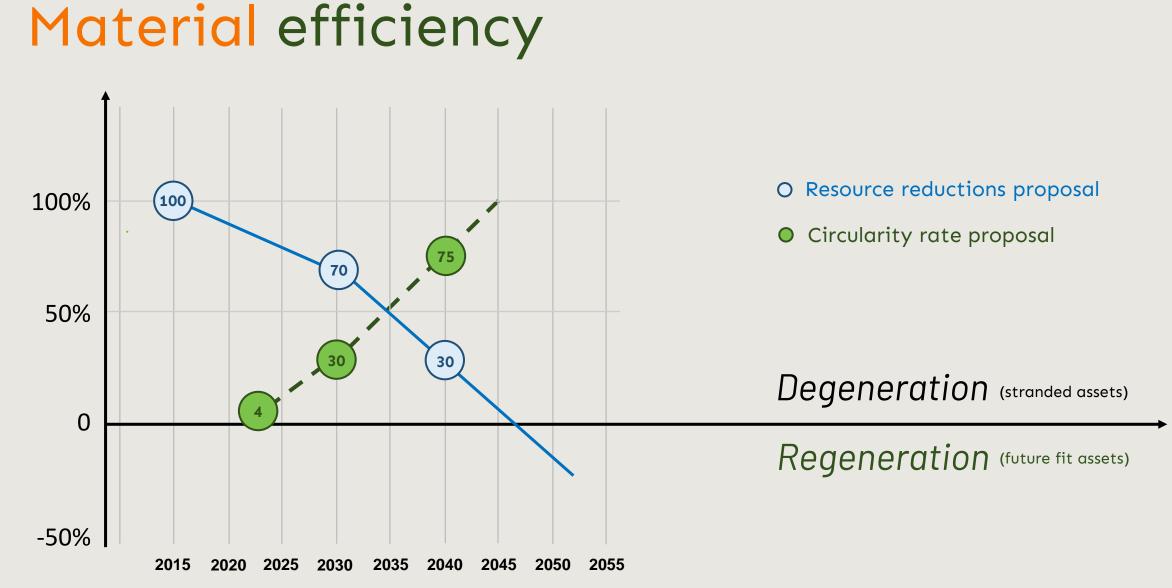

It was the best of times, it was the worst of times

S

Søren Jensen

ш

Sustainable

Doing a bad thing better, so we can continue to do it

Resilient

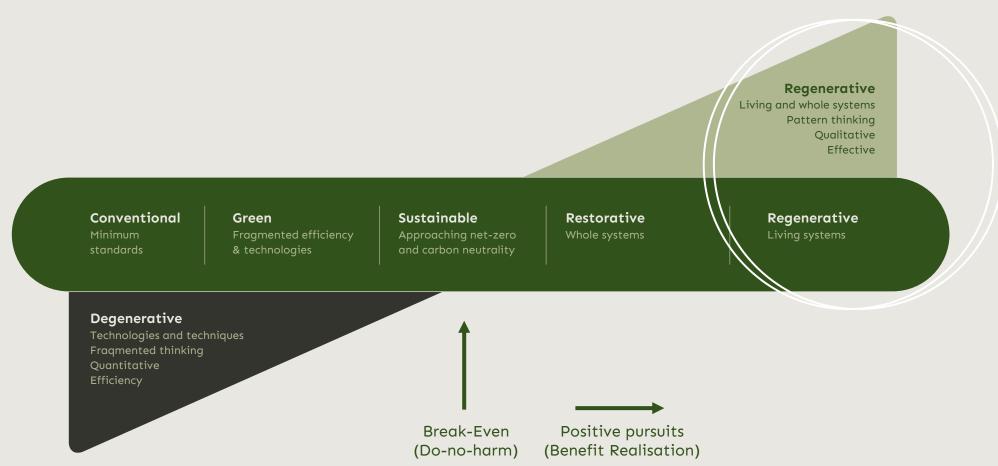

Stuff is going to happen, and things are change is going to happen, [so] prepare for it

Regenerative

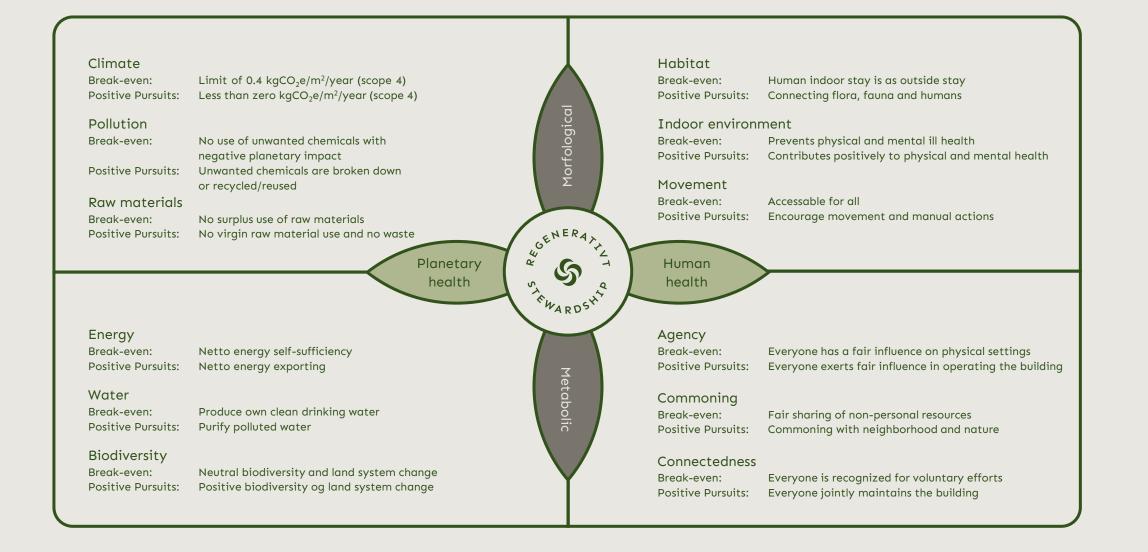

Time to think differently to achieve different goals

Regenerative

Create a built environment which evolves in harmony with nature

ш Ц

Søren Jensen

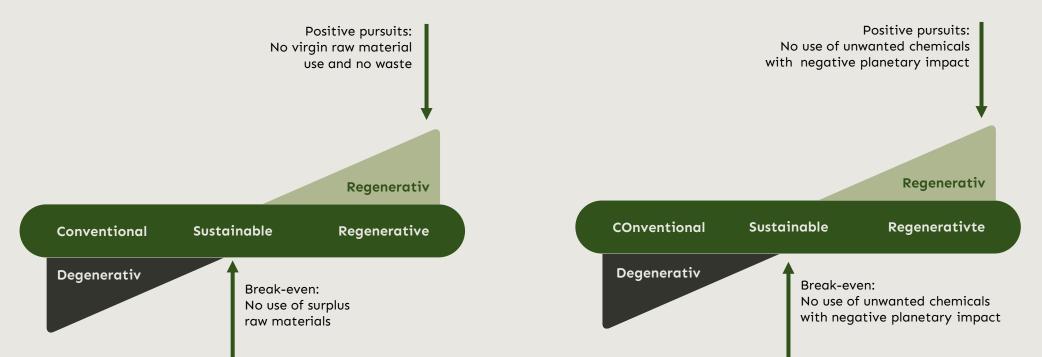

Break-even og Positive Pursuits

Raw matetials

From construction as a consumer of non-renewable raw materials – To construction that consumes no virgin raw materials and generates no waste during building, operation, or deconstruction.

Pollution

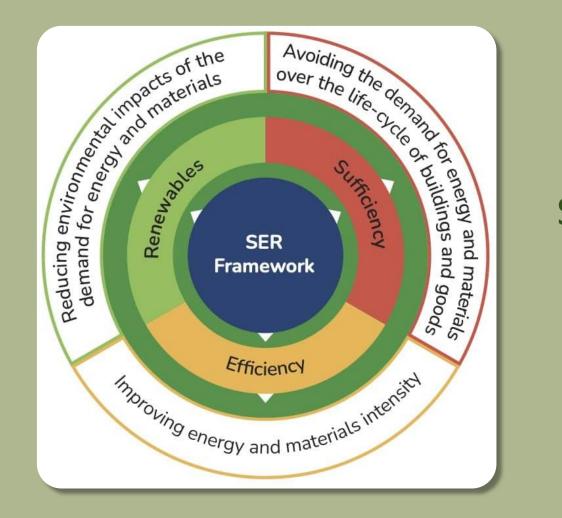

From construction as a source of pollution – To construction that contributes to prevention, recycling/reuse, and the breakdown of harmful chemicals.

Sufficient & Efficient

IPCC AR6 WGIII

Sufficient = Least materials Efficient = Right materials

S

Søren Jenser

Material Intensity Per Service

 $MIPS = \frac{M}{S} = \frac{Material Input}{Service Unit}$

First principles still applies

Structures

The overall requirements and methods are established by BR18.

These have always allowed for project-specific verification of the general functional requirements.

Function

§ 340.

The planning, construction, operation and maintenance of structures and building parts must be carried out in a way which ensures that:

- injuries or damage is not inflicted on persons and buildings on own plot or on other plots;
- 2) no health risk occurs to persons owing to failing structures;
- satisfactory functionality and durability is achieved;
- 4) no health risk occurs to persons owing pest intrusion.

Metode

§ 356.

§ 344(2) to § 351 and §§ 353-355 may be derogated from if it can be ensured and documented by other means that derogation is safe, and if a safety level as described in § 344(2)(1) can be achieved.

1) DS/EN 1990 Basis for planning of loadbearing structures with DS/EN 1990 DK NA.

Current trends

Three horizons

BMW Foundation Herbert Quandt

NAVIGATING THE PATHWAY TOWARDS REGENERATION:

APPLYING THE THREE HORIZONS MODEL **TO NEW MATERIALS**

RESPOND

THE FIRST HORIZON - H1

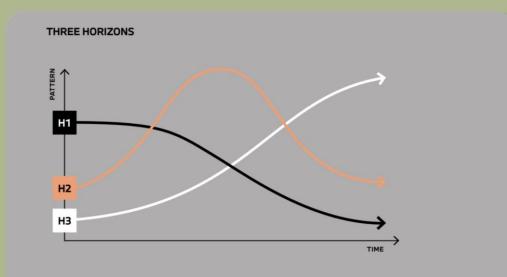

represents the way things are currently done, the prevailing system. When this dominant paradigm starts to show signs of strain and is no longer considered to be fit for purpose, there is a case for change.

THE THIRD HORIZON - H3

shows what a desirable future state may look like.

THE SECOND HORIZON - H2

is an arena of transition where innovations get established to help make our desired future a reality. It points us to what may need to happen in terms of rethinking and (re)inventing new processes, structures, technologies and ways of working in order to create a bridge between the current (H1) and the future (H3) system.¹

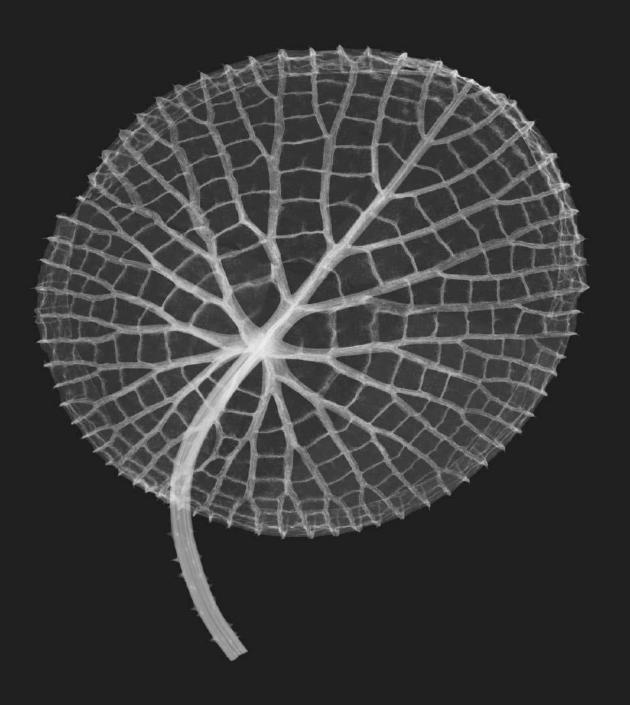

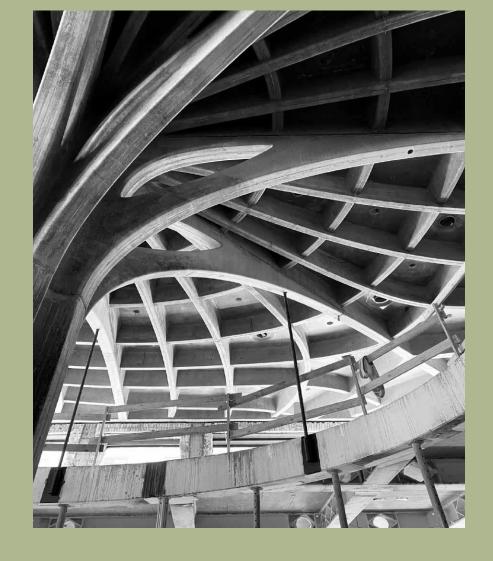

The International Futures Forum (https://www.iffpraxis.com) describes the Three Horizons as follows:

The **first horizon** — H1 — is the dominant system at present. It represents 'business as usual'. We rely on these systems being stable It grows from fringe activity in the and reliable. But as the world changes, so aspects of 'business as usual' begin to feel out of place or no longer fit for purpose. Eventually 'business as usual' will always be superseded by new patterns of activity.

The third horizon — H3 emerges as the long-term successor to 'business as usual'. present that introduces completely new ways of doing things which turn out to be much better fitted to the world that is emerging than the dominant H1 system.

The second horizon — H2 — is a pattern of transition activities and innovations, people trying things out in response to the ways in which the landscape is changing. Some of these innovations will be absorbed into the H1 systems to improve them and to prolong their life (we call these innovations 'H2 minus'), while some will pave the way for the emergence of radically different H3 systems (we call those 'H2 plus').
